The new BI-FABRIC4 is an exceptionally well-built, bi-color LED light with superior light output and quality. The color output

The BI-FABRIC 4 panel, at 48"x12" weighs only 2 pounds! This kit includes a professional-grade dimmer with a battery plate built in (V-Lock or A/B Gold Mount) and DMX controls, and a extension cable.

Working with high CRI bi-color light essentially means there is no need to color correction or warming gels (CTO).

If you're shooting a portrait with the light set to full daylight and want to add a touch of warmth for improved skin tone, it's just a turn of a dial.

If you're working in tight quarters and there's no room for a stand, there's no problem, as you have several other mounting options. Every BI-FABRIC panel has both male Velcro corners and mounting rings, which means you can mount to any surface using female Velcro, screws, nails or even

suction cups. And of course, if it's easier, you can simply gaff-tape the panel to walls, ceilings or poles.

Working with the BI-FABRIC is not like working with any other light. Because it is highly portable, throws beautiful variable light, can be mounted just about anywhere, and is easy to use and built to last, it will free you from conventional restrictions and allow you to improve the quality of your work.
