

Aladdin

70W RGB / BI-COLOR LED

The new Aladdin ALL-IN 1 is like no other light you've ever used. Once you've tested it out, you won't want to use anything else.

Aladdin goes Color

Can you imagine a filmset without LED lights anymore? Probably not. The industry is changing and LED lights became a major deal in the workflow. Most people go for LED lights on their sets and we understand why and how they choose their gear. This is the reason for our endless journey to provide the best LED light sources for the industry. You need just the best of the best and none less. Today is the day we are introducing the brand new Aladdin ALL IN 1

The Aladdin ALL IN 1 is the result of innovation and feedback from the community. By using Aladdin products you are part of the ALL IN 1 journey and helped us create an ingenious light panel for you. Starting with an incredibly compact built-in dimmer on the back of the panel. Less weight, easier handling and much more solid than previous generations.

HIGHLIGHTS

- Use different colors by mixing RGB and BI-Color
- Motion control
- Control by wheeling button on the wireless controller
- Slim Design
- Control it with IOS or Android
- High CRI of 98

- Use different colors by mixing RGB and Bi-Color
- Control by wireless motion detection

You asked for it and we made it possible.

Get the most value out of your production with our new RGB lights. Go for either the 1×1 (ALL IN 1) or 2×1 (ALL IN 2) panel and give your footage the ultimate cinematographic flair. With the RGB panels in your bag you are prepared for almost every situation you will ever face in your production career. If you prefer to stick with a solid bi-color panel the new series provides a 1×1 and 2×1 bi-color as well

Next new feature is the app. We know not everything on this planet needs an app. But why not use this technology for something that is predestined for easier and more accessible control. Why not work faster and more precise on set. The new app provides you all controls in the range of your fingers. Dim a light you just installed on the ceiling across the room without even moving away from your spot. Technology is all there and you are free to use it with us.

With motion control we are even going one step further. Trust your feelings and decide for yourself if you want to use it professionally or not. Motion control for the new panels is provided with the app and the optional remote control as well. Control dimming or color temperature

with a tilt movement of your hand and get astonishing results with this new kind of workflow.
